

## ABOUT THIS COFFEE

The coffee at the farm is produced using sustainable agricultural practices that guarantee the fertility of the soil and the quality of the crop. Weeding is carried out twice a year to maintain the balance of the ecosystem and avoid competition for nutrients. In addition, sanitary pruning is applied to eliminate diseased or unproductive branches, favoring the development of new shoots and the productivity of the coffee trees.

To maintain soil fertility, organic fertilizers are used with coffee pulp waste, which naturally enriches the soil and improves moisture retention. Organic barriers are also used to protect the soil against erosion. Regarding phytosanitary control, biological management of the coffee berry borer is implemented and a sanitary harvest is practiced to guarantee the quality of the beans.

Farm	<b>La Envidia</b>
Producer	<b>Nicolas Colque</b>
Species	<b>Arabica</b>
Varieties	<b>Red catuai</b>
Process	<b>Natural</b>
Drying	<b>Patios</b>
Altitude	<b>1550</b>
Harvest	<b>May - September</b>
Type of harvest	<b>Manual</b>
