JUKIA 72HR

Jukia Microstation is a farmer-led and sustainable coffee production station located in Zombo District in north-western Uganda. The station was constructed in 2022 by Zombo Coffee Partners Ltd, and it is fully managed by the company and serves as a central processing hub for over 300 registered farmers in the region.

Zombo Coffee Partners operates a regenerative approach to agriculture, and farmers supplying Jukia Microstation are trained in different ecological approaches. The farmers have also been trained to prepare and apply bioliquid foliar sprays and compost, intercrop their coffee with legumes and shade trees, mulch their fields, and dig trenches to reduce stormwater erosion.
