

ABOUT THIS COFFEE

From the highlands of Hambela Wamena Woreda in Guji, this coffee tells story one of rarity. The 74140 variety is uncommon—even in Ethiopia. Pathologists and agronomists prize it for its high yield and natural resistance to Coffee Berry Disease (CBD). You'll prize it for its wild berry intensity, jasmine lift, and honeyed body.

Grown on small, hectaresized plots in the kebeles of Buku and Bishan Fugu, these coffee trees live in polyculture—among fruits, vegetables, and cereals. All picking is done by hand. And because the farm sits just above 2,000 meters, insects are fewer, drying is slower, and the coffee emerges cleaner and sweeter.

Cherries are handharvested from the 74140 trees, which grow in polyculture with other food crops. At the Alaka station, pickers manually sort cherries. Only ripe, red cherries proceed. Cherries are turned regularly during the day and covered at night or during rain.

Producer	METAD AGRICULTURAL DEVELOPMENT PLC
Species	Arabica
Varieties	74140
Process	Natural
