

## ABOUT THIS COFFEE

Valle de Oro is one of MAV Coffee's 3 farms. Here, nothing is left to chance, starting with the variety produced on the farm: Marsellesa.

On the subject of inputs, the farm is pesticide-free. The coffee trees are protected by the grasses that grow naturally at their feet. These grasses feed the insects that would otherwise feed on the coffee leaves. This way, MAV also avoids using insecticides.

To continue to preserve its coffee trees and regenerate the farm each year, Valle de Oro is managed as follows: the coffee trees are planted in rows, and each row is pruned differently from one year to the next:

- \* Row 1 generates 65% of the harvest ;
- \* Row 2 is in the recovery phase and generates 25% of the harvest. It will take the place of row 1 next year ;
- \* Row n°3 is pruned to generate 10% of the harvest, and will take the place of n°2 next year.

|                 |                  |
|-----------------|------------------|
| Species         | Arabica          |
| Varieties       | Marsellesa       |
| Process         | Washed           |
| Drying          | Drying beds      |
| Altitude        | 1050             |
| Harvest         | December - March |
| Type of harvest | Manual           |
