

ABOUT THIS COFFEE

Alo is one of the latest washing station to be inaugurated by DWD, and started operating in 2021. This station is located in Sidama area, Bensa Woreda, 1 km from Alo kebele (village).

2020 campaign

This red honey processed coffee was dried on African beds. To control the drying of the cherries, two people are assigned full time to each bed. Depending on the weather, the drying time can vary from 18 to 22 days. The dried coffee is then transported in jute bags to a warehouse at the washing station for storage on pallets. When the station's warehouse reaches its maximum capacity (usually within three days at peak harvest), the coffee is transferred to a larger warehouse in the Woreda (district) of Bensa.

Environmental impact

A wide variety of coffee trees overhang the plantations such as Grawa, Bisana, Wanza, Koso, Dokma, Kerkaha, Kerero, Birbirs, Popocarpus falcatus, Tsid, Zembaba...

Farm	Alo
Producer	DWD
Species	Arabica
Process	Red honey
Drying	Drying beds
Altitude	2350
Harvest	December - February
Type of harvest	Manual
